

Chapter 1

INTRODUCTION

1.1. Problem Definition

There are so many difficulties for the university students in seeking their appropriate jobs for internship and still facing unsolved problems until now. It is not easy to fit all vacancies and numbers of students in particular industries. There also has a difficulty for some students concerned living local place to get their desired jobs. Most students want to perform internship where located near their home. According to their various desires, students have to find their internship jobs by going to all technical companies themselves. So, it takes a lot of time and cost. On the other hand, professors have many paper works and difficulty in informing to all students the opportunities of offered jobs by companies.

If there will be a website that can handle these difficulties of educational organizations, it will be more convenient. As UCSM is a technological university, there should have an online platform that can serve internship process more easily and not much busy. That's why **"UCSM Internship Portal Management System"** appears to all users such as professors, university students and companies.

1.2. Project Overview and Specifications

"UCSM Internship Portal Management System" is an online platform designed to manage internship process. Internship is an essential part of many students' education before they graduate, providing them with valuable hands-on experience and exposure to the working world.

The system aims to provide an organized and user-friendly website for students, companies and universities. Students, companies and admin have separate accounts to access the services of system. Students can search and apply for internships that match their interests and qualifications. Companies can post internship opportunities on the portal, including details such as job description, requirements, location, duration, and company's descriptions. Admin can check the number of internship students, job posts, companies who offer jobs and list of students who serving internship.

The system provides all necessary information about internship in one place. Also for junior students, they can learn professionals and seniors' chosen fields, potentially leading to future job opportunities. They gain a better understanding of their career interests and goals, allowing them to make more informed decisions about their future internship. The system will be effective and efficient for all users.

1.3 Hardware Specification

Processor	: Intel CORE i7
Ram	: 4 GB
Hard Disk	: 20 GB
Keyboard	: 107 keys
Mouse	: Microsoft

1.4 Software Specification

Operating System	: Microsoft windows 11
Language Requirement	: HTML, CSS, JavaScript, PHP and MySQL
Database System	: XAMPP
Design Conventions	: draw.io
Web Browser	: Any web browser is compatible like Mozilla, Firefox, Google Chrome, etc.

Chapter 2

BACKGROUND

2.1. Existing System

“UCSM Internship Portal Management System” can help the students to enable look up for different jobs according to their qualifications and apply for those jobs conveniently. It can also help the university to ease the process of informing students internships opportunities making them aware of their skills and abilities. The system helps companies to find qualified candidates. It also provides valuable data and insights to improve the internship program and enhance the overall experience for both students and companies. Moreover, the system can reduce paperwork, human resources and cost for all participants. At present, all universities need a computerized system like “UCSM Internship Portal Management System”.

2.2. UCSM Internship Portal Management System

The system is designed as a user-friendly and effective platform. It provides for all users a homepage which can view and learn about internship. For admin, he need to login with his username and password. If his login process is valid, he can manage student’s account and company’s account and he can also manage job posts. Admin can also give permission to other teachers as co-admin.

For non-registered students, they can view homepage and internship posts. If they want to apply these jobs, they need to register. The registered student need to login to apply job. If the job of the company accept his request, he will receive approved message. If he receives cancel message, he needs to search jobs again.

In the system, a company needs to register and login to post internship posts. Only registered company can view students list who apply to their vacant jobs. They must download student’s cv form to approve or to deny. If they want to approve a student, they need to click accept button. Clicking button instantly, the system will send message to student automatically. They can also edit their job posts and the descriptions.

2.3. Feasibility Study

The system is developed by using HTML, CSS, JavaScript for frontend and also Bootstrap for UI design. For illustrating UML diagrams, we use draw.io. We use PHP and MySQL Database for backend with XAMPP server. Basic of most of these languages are we have been learning since the first year but we have to search advance coding ways in social media and programming textbooks. We start learning PHP from various resources. Also our seniors' project reports are constructive for us, especially in documentation.

Chapter 3

SYSTEM ANALYSIS AND DESIGN

3.1. Requirement Specification

These are tools that are necessary for the workability of the proposed system: these tools are divided into two specifically:

1. Functional requirements
2. Non-functional requirements

3.1.1 Functional Requirements

- **User Login:** Users must login with username and password to the system after registration. If they are invalid, can't enter the system.
- **Registration:** A new user will have to register in the system by providing essential details in order to use the web-services.
- **Validation:** The system will approve all information of these two users after checking such as username and password.
- **Search Jobs:** The student can view different jobs after confirming the login, search and apply by providing the necessary details.
- **Post Jobs:** Company can post vacancies.

3.1.2 Non-Functional Requirements

- **Efficiency:** When the system is implemented, university students and companies can view and upload job vacancies respectively from their homes easily without any difficulty.
- **Usability:** The system is designed for a user-friendly environment and ease of use.
- **Reliability:** The system should provide a reliable environment for both students and companies.
- **Security:** An unauthorized person cannot access the panel and database, and do not read and write the information.
- **Scalability:** The system may be expand later with increasing amounts of users, data and performances.
- **Availability:** It will be available online 24/7 a week.

3.2. Flowcharts and Diagrams

The following diagrams are the system design and database design using in the system.

3.2.1 Flowchart Diagram for Admin

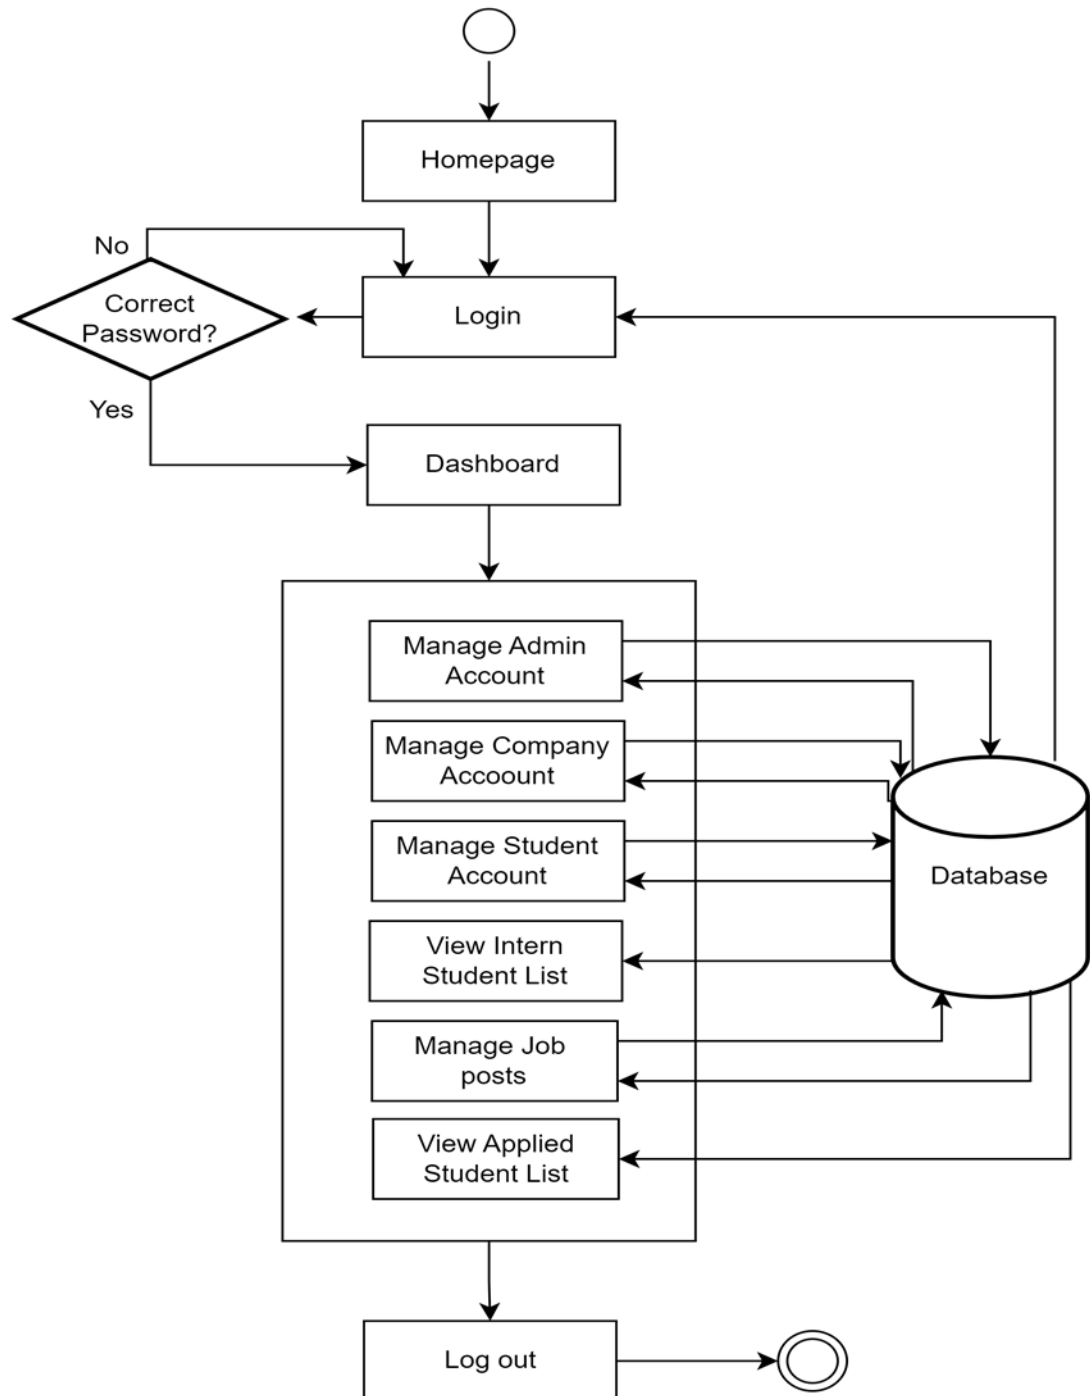

Figure 3.1 Flowchart Diagram for Admin

3.2.2 Flowchart Diagram for Student

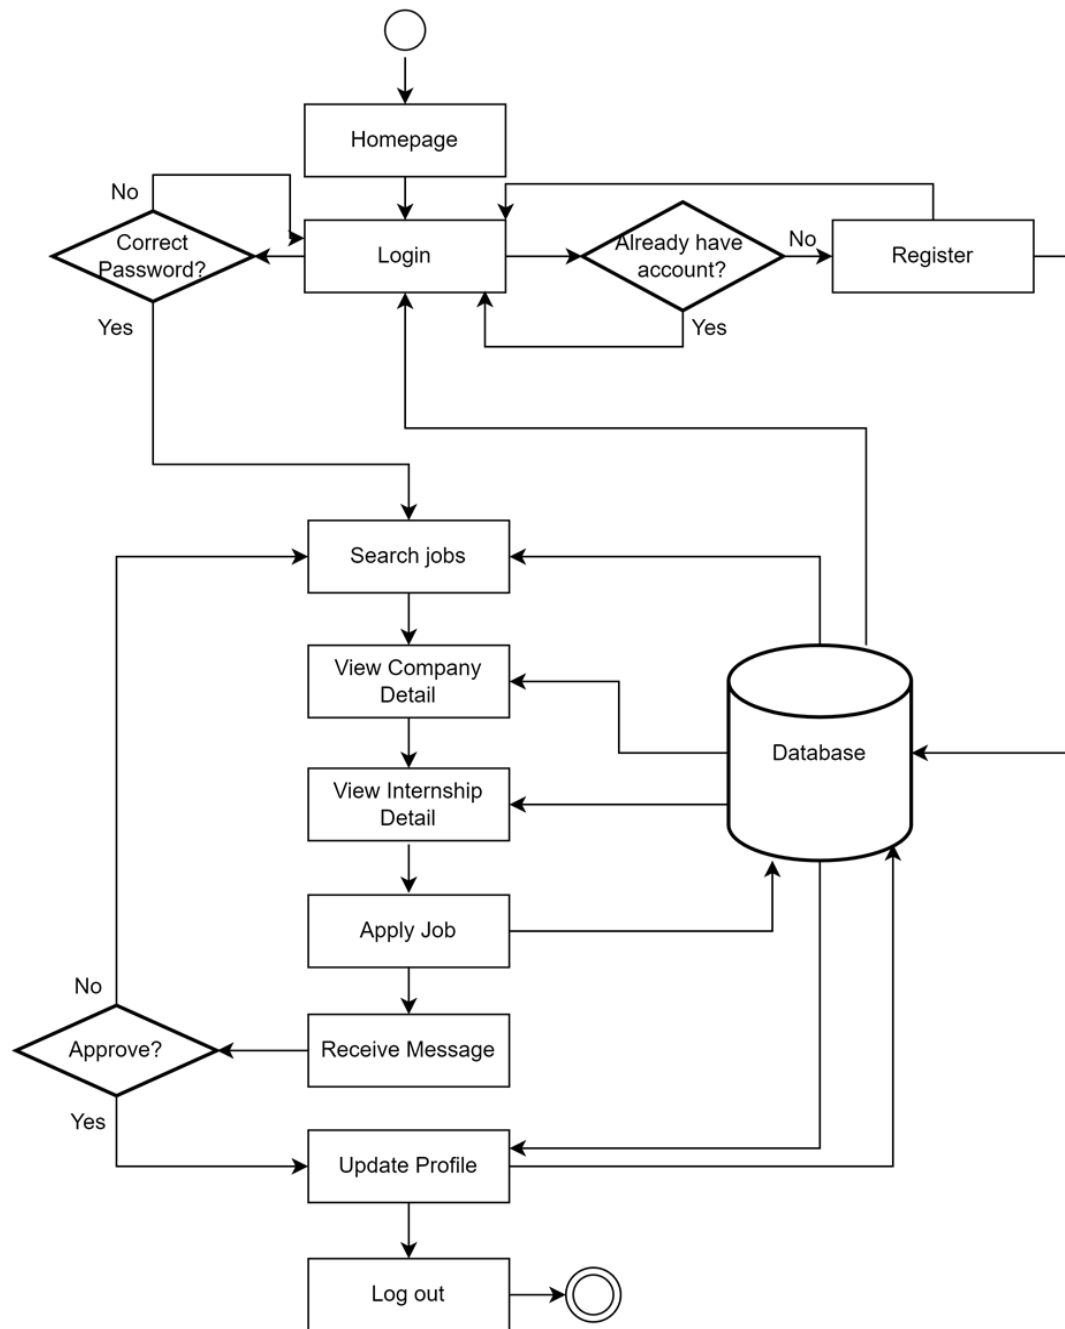

Figure 3.2 Flowchart Diagram for Student

3.2.3 Flowchart Diagram for Company

3.2.6 Sequence Diagrams for Company

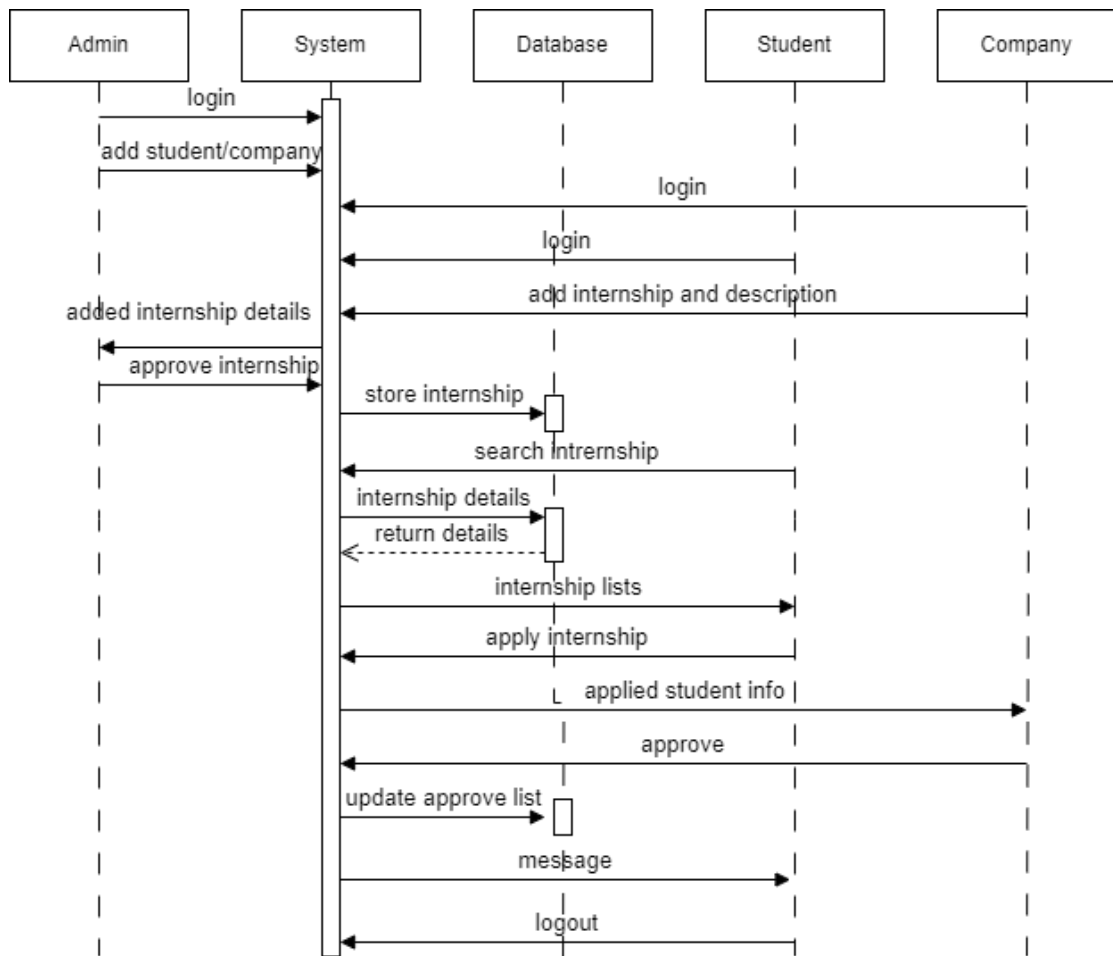

Figure 3.7 Sequence Diagram

3.2.7 Database Design for the system

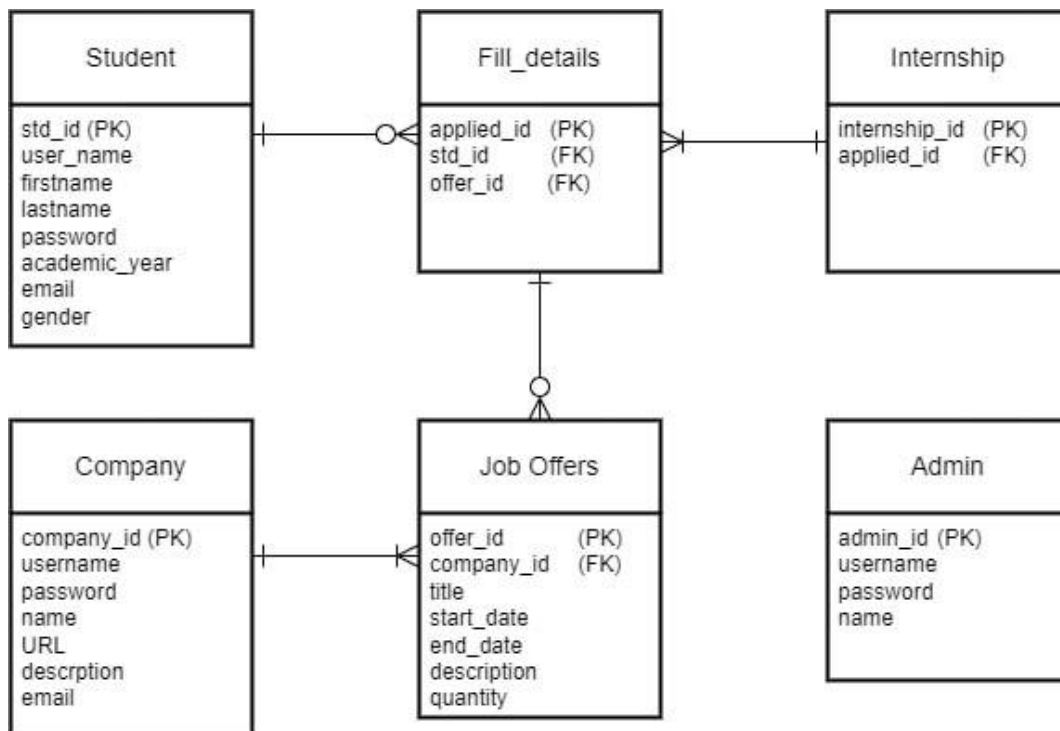

Figure 3.4 Database Design (ER) Diagram

3.3 Testing Processes

In this section, the testing processes using in the system are described.

3.3.1. Testing Rules

Table 3.1 describe the testing rules using in the system.

Table 3.1. Testing Results for Register

No.	Rule Description	Rule Type
1	The length of the name at least 3.	Valid
2	The name is null value or blank space (length=0).	Invalid
3	The length of password is greater than or equal to 6.	Valid
4	The password and confirm password are not the same.	Invalid
5	The password is null value or a blank space(length=0).	Invalid
6	The confirm password is null value or a blank space(length=0).	Invalid
7	The type of the name is name is alphanumeric.	Valid
8	The type of the name includes space.	Valid
9	The email entered the user matchs email pattern.	Valid
10	The email is only numbers.	Invalid

3.3.2. Sample Static Testing

The sample static testing using in the system is described in the following table.

Table 3.2. Sample Static Testing

Static Testing	Input	Expected Result
	Full Name : Cherry Phoo Email : cherry19@gmail.com Password : chp2005@ Confirm Password : chp2005@	User Registration process success.
	Full Name : Nann Nadi Email : cherry19@gmail.com Password : nann12* Confirm Password : nann12*	User registration process fails. Show the “Email already exist” because this email already exists in this system.
	Full Name : Yuzana Moe Email : yuzana20@gmail.com Password : yuzana20# Confirm Password : yuzana20\$	Registration is not successful. Show the “password not match” because password and confirm password are different.
	Username : koko12 Password : koko2003@	Login success. Valid username and password.
	Username : kalay Password : 123456	Login fail. Invalid username or password.
	Username : admin Password : admin007	Admin login process fails. Show the “username or password invalid!”
	Username : admin Password : Admin123\$	Admin login process success.

3.3.3. Data Dictionary

The data elements using in the system are described in the following Table.

Table 3.3 Data Dictionary

Data Elements	Description	Composition or Data Type	Length	Values
Admin	The person, who control the system			
User	The person, who using the system			
User Name	The name of the user to enter the system	String (Alphanumeric Characters)	255	Special Characters are permitted
User Email	The email of the user to enter the system	String (Alphanumeric Characters)	255	Special Characters are permitted
User Password	The password for the user to enter the system	String (Alphanumeric Characters)	255	Special Characters are permitted
Admin Username	The username of the admin to enter the system	String (Alphanumeric Characters)	255	Special Characters are permitted
Admin Password	The password for the admin to enter the system	String (Alphanumeric Characters)	255	Special Characters are permitted

4.3 Student Login Page

If student want to apply desired jobs and click apply button, he will reach to login page and if he is a new user, he must register first.

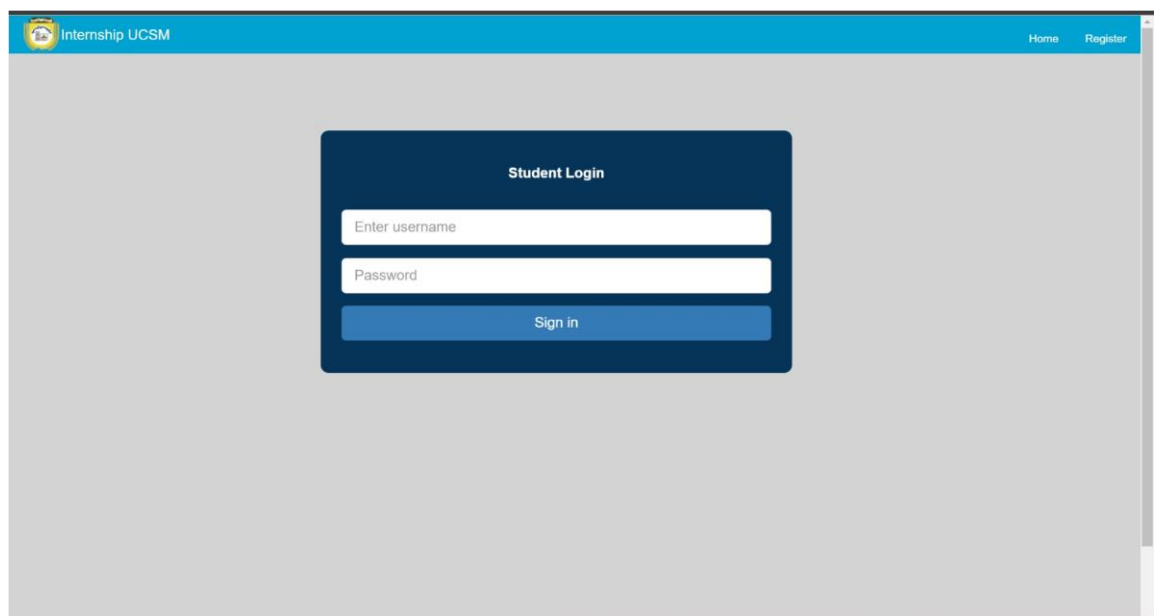

Figure 4.12 Student Login Page

4.3.1 Student Registration Page

This is a registration page. A student must fill all details about his personal information. The system will store users information in database when he click register button filling all request data.

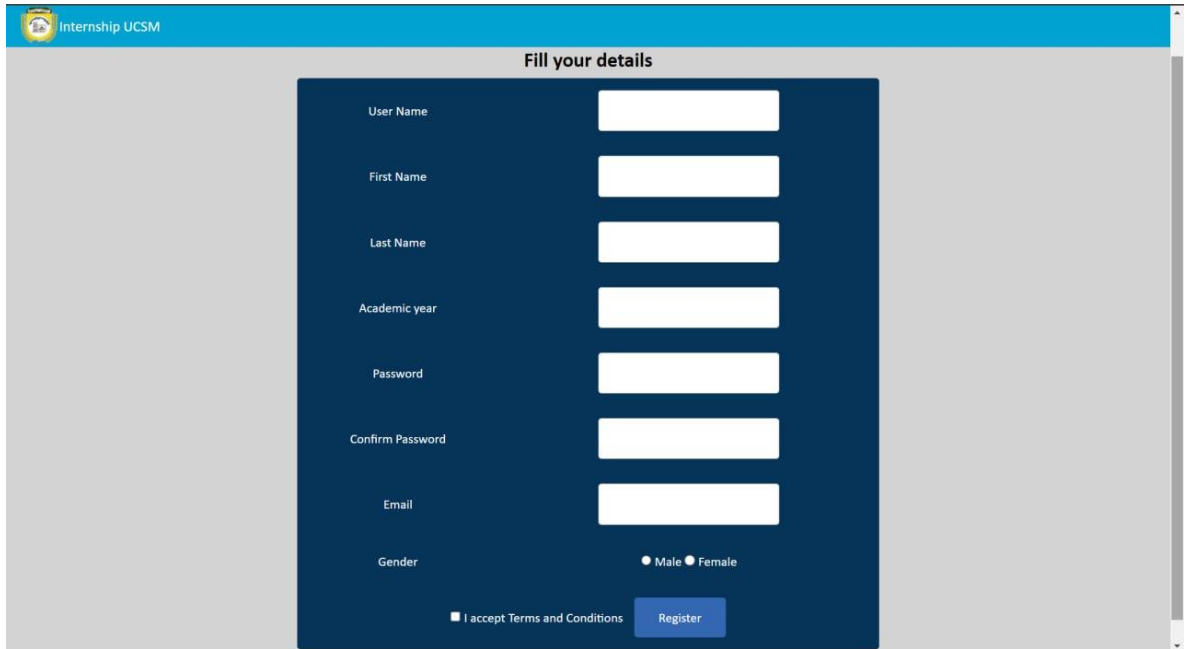

The screenshot shows a web application titled "Internship UCSM". The main heading is "Fill your details". The form contains the following fields: "User Name", "First Name", "Last Name", "Academic year", "Password", "Confirm Password", "Email", and "Gender". The "Gender" field has radio buttons for "Male" and "Female". At the bottom, there is a checkbox for "I accept Terms and Conditions" and a blue "Register" button.

Figure 4.13 Student Registration Page

44.3.1 Student Fill Details Page

This is a fill details page. When login is correct the system will automatically fill the data that from what offer the user is selected.

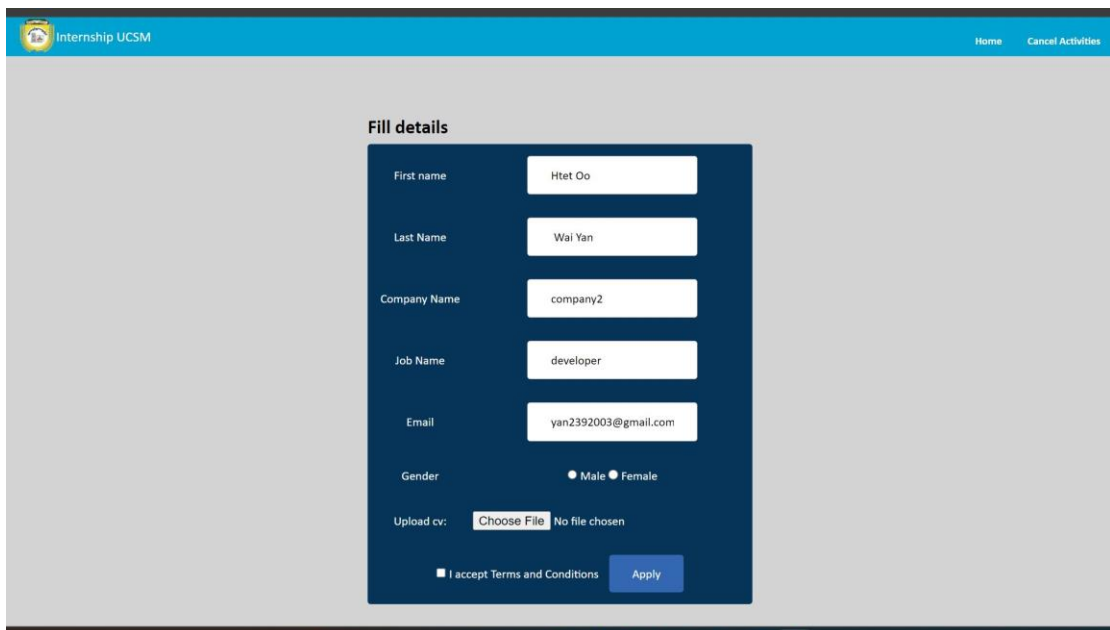

The screenshot shows a web application titled "Internship UCSM" with links for "Home" and "Cancel Activities". The main heading is "Fill details". The form contains the following fields: "First name" (filled with "Htet Oo"), "Last Name" (filled with "Wai Yan"), "Company Name" (filled with "company2"), "Job Name" (filled with "developer"), "Email" (filled with "yan2392003@gmail.com"), and "Gender" (radio buttons for "Male" and "Female"). There is also an "Upload cv:" section with a "Choose File" button and the text "No file chosen". At the bottom, there is a checkbox for "I accept Terms and Conditions" and a blue "Apply" button.

Chapter 5

CONCLUSION

After the implementation of this project, we have got a useful educational website, **“UCSM Internship Portal Management System”**. The development of this product gives all university students and professors more ease internship process. Also for industries, each business IS be able to get potential candidates more easily. We aim to be efficient for all parties in internship. The system will provide all necessary information about internship in one place. This will stand as a guidance for intern students for right decisions and selections in their internship period.

Finally, we have been created a helpful and useable web-based system for **UCSM**. This will become a successful communication of students, university and business companies. The outcome is a systematic website which can provide all users more powerful and smarter internships.
